Professional Summary

Full Stack Developer with production experience shipping end-to-end web and mobile apps across TypeScript, React, Next.js, Node.js, and MongoDB. Track record of reducing latency, architecting real-time and distributed systems, building RAG/AI features, and operating cloud infrastructure end to end. Seeking full-time Software Engineering roles.

Technical Skills

Languages TypeScript, JavaScript (ES2022+), Python
Frontend React, Next.js, React Native, Tailwind CSS, RTK Query
Backend Node.js, Express.js, FastAPI, Socket.io, BullMQ
Databases MongoDB, PostgreSQL, Redis, Firebase, Supabase
Infrastructure AWS EC2, Nginx, Cloudflare, Docker, VPS, Cloudinary
Tools Prisma ORM, FFmpeg, GraphQL, Git, Vercel AI SDK

Experience

Full Stack Developer Intern, Cerope (*Remote*)

2025 – Present

- Shipped full-stack features across a Next.js frontend and MERN backend, owning work from design through production with zero post-deployment rollbacks.
- Built and maintained a React Native mobile application alongside the web platform, ensuring feature parity across all major releases.
- Introduced Redis caching on high-traffic APIs, reducing response times from **~10 seconds to under 200ms** and lowering MongoDB query load by **60%+**.
- Managed production deployments across AWS EC2 and VPS environments while maintaining **99%+ uptime**.

Full Stack Developer Intern, KodeCompiler (*Remote*)

2025

- Built features across a React frontend and Python FastAPI backend for an online coding platform serving hundreds of active users.
- Engineered an in-browser compiler supporting **10+ programming languages** and a LeetCode-style execution engine evaluating **100+ test cases** per submission.
- Created an end-to-end NoSQL (MongoDB) query execution environment, letting users run database queries against isolated sandboxes with structured, real-time result output.

Projects

Project Teams

[Live](#) — [GitHub](#)

React • Node.js • MongoDB • Socket.io • BullMQ • Redis • Vercel AI SDK • AWS

- Built a real-time collaboration platform — live chat, presence, and co-editing over Socket.io at **sub-100ms** latency on a MERN stack — with an in-app AI suite (summaries, auto-tagging, grammar) on the Vercel AI SDK and Gemini.
- Engineered a RAG document Q&A pipeline: offloaded PDF parsing, chunking, and Gemini embedding to a BullMQ/Redis worker, with tenant-isolated MongoDB Atlas Vector Search returning citation-grounded answers.
- Deployed to production on AWS EC2 with PM2-supervised API and queue-worker processes behind an Nginx same-origin reverse proxy, fronted by Cloudflare and Let's Encrypt TLS.

AVMG

[Live](#) — [Frontend](#) — [Backend](#)

Next.js • Node.js • Redis • BullMQ • FFmpeg • PostgreSQL • Prisma • Supabase

- Architected a distributed media transcoding pipeline using FFmpeg and BullMQ, reducing queue pickup time to **under 500ms**.
- Built Ghost Mode subtitle extraction using yt-dlp's skipDownload flag, reducing transcript overhead from **~400MB to under 1MB**.
- Shipped an AI-powered notes generator backed by PostgreSQL and Prisma with a zero-leak ephemeral file lifecycle.

KropiGo

[Live](#) — [GitHub](#)

Next.js • React • Node.js • MongoDB • Socket.io • RTK Query • Cloudinary

- Built a real-time agri-marketplace connecting farmers directly with buyers, with live order and listing updates over Socket.io on a MERN/Next.js stack.
- Implemented role-based access and moderation flows for farmers, buyers, and admins overseeing the marketplace, with Cloudinary handling produce media.

SolarVistar

[Private Repository](#)

React • Node.js • MongoDB • PostgreSQL • Prisma • RTK Query • Cloudinary

- Delivered a full freelance CRM for a solar energy company used by **10+ sales personnel**.
- Modelled relational data in PostgreSQL with Prisma and added RTK Query caching, cutting reporting latency to **under 300ms** and redundant API traffic by **~40%**.

Achievements

- **Hackathon Winner** — **HackJEC 4.0** Built and won with a full-stack mental health platform while competing against 50+ teams under 24-hour constraints.
- **Technical Team Member** — **Karwaan JEC** Contributed to technical initiatives, workshops, and college-wide events as a core member of the technical team.

Education

Bachelor of Technology, Electronics & Communication Engineering

2023 – 2027

Jabalpur Engineering College (JEC), Jabalpur
